Information & Contact

General instructions on submitting samples

- * The material must be packaged in plastic and the packaging must be sealed properly. Ship the sample in a sturdy box and include the submission form with the samples in the box.
- * Liquid samples must be submitted in vapour-tight packaging.
- * Submission forms for the different types of orders can be found at our website, they can also be requested at the administration (laboratory@naktuinbouw.com).
- * Shipments of plant or seed samples for research purposes from outside the European Union (3rd countries) need to be accompanied by a phytosanitary certificate or a letter addressed to the Dutch NPPO (DOIV). You can request the letter on our website. Please contact our lab administration (laboratory@naktuinbouw.com).
- * If you state on your shipment that it is URGENT and has to be given priority, the sample will be prepared and tested as soon as possible. An extra urgency rate will apply.

myNaktuinbouw

Requests for seed analysis, seed health testing and nematode testing, can be submitted electronically through myNaktuinbouw. You enter the data of the sample and select the appropriate tests. Subsequently, the sample can be sent to Naktuinbouw. When results of the tests are ready, they are available at myNaktuinbouw. You will receive the certificates as you're used to. More information can be found on www.naktuinbouw.com or feel free to contact us via: mijn@naktuinbouw.nl.

Additional instructions

Submitting seeds

- * Seed tests have been developed and validated for untreated seeds. Since the reliability of health tests may be affected if seeds have been treated, submitted seed samples should preferably be untreated. This does not apply for tests where it is stated that it can be applied on treated seeds.
- * If seeds have been disinfected, coated or pilled, please inform us accordingly for the sake of the safety of our employees and possible influence on test results.

Submitting plant material

- * Please note that you do not send plant material on Friday due to the weekend. We would like to receive your material no later than the Wednesday before the week of the assessment.
- * The samples must be individually packed and labeled. For ELISA and PCR test, please take a look at the [manual](#).
- * If you have more questions about sampling, please contact our customer service (laboratory@naktuinbouw.com).

Submitting material for diagnostic testing

- * Pack roots and leaves in such a way that leaves cannot be polluted by soil, e.g. by wrapping the roots in a separate plastic bag and sealing it with a elastic band around the stems.
- * Send a whole plant if possible. Leaf symptoms may be caused by root problems.
- * If needed you can send pictures to diagnostiek@naktuinbouw.nl.

Submitting material to make it free from viruses

- * Special conditions apply to the submission of material which has to be made free from viruses. You can obtain more information at Naktuinbouw Test Center in Horst (Netherlands); testcenter@naktuinbouw.com or by phone on +31 77 398 59 19.

Terms and conditions of delivery and disclaimer

The General Terms and Conditions of Naktuinbouw apply to all services provided by the Naktuinbouw Laboratories (registered with the Chamber of Commerce and Industry for Rijnland in Leiden, the Netherlands, under no. 41150707). You can find on our website: www.naktuinbouw.com/terms-and-conditions.

All amounts stated are excluding VAT. Changes to rates are reserved.

If testing / diagnosis is not carried out by Naktuinbouw but, after having consulted the client, is subcontracted to a third party, the corresponding costs will be charged to the client.

If you state on your package that it concerns an URGENT assignment, an urgency rate will be apply.

Diagnostic samples are always priority; an extra urgency rate will apply.

Additional testing may be required if a possible pathogen is found. Extra costs for confirmation testing will be charged.

The results of tests or assessments provided by Naktuinbouw Laboratories only relate to the actual sample tested and not to the lot concerned, unless Naktuinbouw states otherwise.

General costs

Naktuinbouw charges administrative fees per registration.

Basic fee 2025

- * Basic rates will be calculated per assignment¹:

Basic rate per assignment per crop	Regular	€ 40,40
	Via myNaktuinbouw ²	€ 24,40

- * Assignments for plant material: Samples of the same crop are jointly registered in one assignment. The basic rate will be charged once.
- * Assignments for seeds and soil: Each sample is registered as a separate assignment. The basic rate is charged per sample.
- * Assignments for a combination of soil, seeds and plant material: These are different samples and are registered as a separate assignment. The basic rate is charged per assignment.

¹ This applies only to Variety Identification, Seed Quality Analysis and Phytopathology assignments

² Registration through myNaktuinbouw is only possible for tests on soil and seeds. Plant material cannot yet be registered through myNaktuinbouw

In addition to the tests performed by Naktuinbouw, we also offer a number of general services.

Identity & Quality

The identity and quality of propagating material is important. Naktuinbouw can assess the identity and quality of your material.

Do you doubt the identity of a variety? Do you suspect admixture in a lot? Or is your material showing symptoms and do you want to know what it is?

Naktuinbouw can help you find an answer to these questions. We can also make tree nursery crops virus-free, and provide quality and purity determinations for seeds of flowers, trees, vegetables, fruits and herbs.

Arboriculture Crops and Fruits

Bio assays and making crops free from viruses

Arboricultural crops (including apples, pears, small fruit, strawberries and roses) are made free from viruses by means of various treatments, including heat treatment, at the Naktuinbouw Test Centre in Horst. The tops of treated plants are grafted onto virus-free rootstock or propagated from cuttings. Subsequent laboratory analyses, liquid inoculations using test plants and grafting onto woody indicators is applied to confirm the virus-free status of the grafted tops.

Composition of the test fee

Naktuinbouw charges a base fee for handling costs in addition to the test rate as indicated below.

In addition, a base rate per entry per crop is charged for the purpose of administrative processing.

Base rate: **€ 68,50**

Diagnostics

Diagnostics brings the practice of horticulture, the diagnosticians and the researchers of Naktuinbouw Laboratories together. Annually about 250 different crops from numerous countries are studied. The wide experience makes Diagnostics a good partner for reliable diagnoses of diseases, pests and cultivation problems. Please note that our Diagnostics team only performs tests on material with symptoms.

Composition of the test fee

Our Diagnostics Team works with a fixed rate. Assignments are immediately processed. The fees below are including the urgency rate. Our Diagnostic Laboratory can handle virus tests for limited-scope diagnosis such as TSWV, INSV and PepMV rather quickly and the applicant can have the test result usually within one day. If necessary, found organisms can be further identified with the help of molecular techniques.

Fees for diagnosis

	Method	Test rate
Standard diagnosis, first sample	Depending on disease	€ 323,00
Each additional sample		€ 150,00
Limited diagnosis, first sample	Visual or other limited research	€ 253,00
Each additional sample		€ 150,00
Testing for up to 5 viruses, first sample	ELISA	€ 173,00
Each additional sample	ELISA	€ 80,00
Testing for up to 10 viruses, first sample	ELISA	€ 207,00
Each additional sample	ELISA	€ 109,00
PCR testing per sample ¹	PCR	€ 144,00
Sequentie analyse (such as Minion)	Sequencing	€ 590,00
Fee per hour for additional work (if needed)		€ 189,00

	Method	Basic test	Agglutination ¹	Confirmation PCR ¹
<i>Erwinia amylovora</i>	Culture method	€ 224,00	€ 63,00	€ 83,50
<i>Phytophthora fragariae</i>	Visual determination	€ 199,00		€ 142,00
<i>Xanthomonas arboricola</i> pv. <i>pruni</i>	Culture method	€ 245,00		€ 142,00
<i>Xanthomonas fragariae</i>	Culture method	€ 184,00		€ 142,00

* The fee for any succeeding additional sample only applies to samples of the same assignment and same crop.

* If an assignment is clearly so extensive that additional costs must be incurred it cannot possibly be done for these fees, we will contact you in advance.

* If a submission contains many samples, it may be chosen to work according to an hourly rate. This may also be chosen in the case of non-standard tests or combinations of tests. In these cases we will contact you in advance.

* Extra costs for additional services provided, such as sampling or transport, will be charged invoiced.

¹ An extra PCR test is carried out when final identification of a pathogen is needed.

Seed Quality Analysis

The Seed Analysis Laboratory carries out various tests to assess the quality of seed of flowers, trees, vegetables and herbs. Tests for germination, purity and moisture content or for tetrazolium and weeds are carried out under ISTA accreditation. In addition, the more practice-related Usable Plants Test can be performed. This can be applied to crops such as tomato, sweet pepper, cucumber-like crops, lettuce and cabbage.

Lead time

The lead times are not stated here, because they are crop-dependent. The waiting time till start of the test will be maximal 3 weeks. In exceptional cases (e.g. large demand of tests) it might deviate.

Variety Identification

Identity testing

Naktuinbouw has laboratory techniques to determine the identity of your material. This may be important and useful where material has been mixed, mistakenly replaced, origin tracing (pathogens), when the matter is urgent and/or when morphological research is not possible.

Identity testing is carried out by using DNA fingerprint techniques. A typical research project includes sampling, DNA isolation, fingerprinting, analysis, determination of the genetic relations, statistical analysis and reporting.

It is important for identity testing that the commissioning party provides the samples as well as adequate reference samples. If samples need to be compared to a Naktuinbouw database with varieties from a third party, Naktuinbouw has to and will ask for permission from said parties before a report can be issued.

For the crops; Strawberry, Phalaenopsis, Apple, Potato and Rose Naktuinbouw features a SSR-Database. For these varieties it is possible to do an identification project per sample.

Rates for SSR identification

Number of samples	Rate per sample (ex. base rate page 6)
1-4 samples	€ 364,00
5-8 samples	€ 336,00
9-16 samples	€ 303,00
More than 16 samples	Upon request

Fee for standard AFLP projects

Sample selection for AFLP projects are the responsibility of the commissioning party. If Naktuinbouw feels that the selection of reference varieties and/or the number of primer combinations are inadequate, no report will be issued until further testing. Unless the commissioning party is requesting a specific set of primer combinations for testing and analyses, it is up to Naktuinbouw to choose the primer combinations which will be tested.

Number of samples	Rate per sample (ex. base rate page 6)
1-16 samples with 4 primer combinations	Upon request
For other amounts of samples (17-32 or 33-64) and/or other amounts of primer combinations	Upon request

Variety Tracer

Naktuinbouw developed a concept to help with settling the allegations of infringement of Plant Breeders' Rights and patents: Naktuinbouw Variety Tracer®. It can provide evidence in cases of alleged infringement of plant breeders' rights, it allows to determine the identity of varieties and it can confirm suspicion of repeated cropping. Naktuinbouw Variety Tracer combines knowledge, independence and the possibility of morphological research with the possibilities of DNA fingerprint techniques. It is the combination of – and synergy between – these elements that guarantees extremely sound analyses and provides important evidence for possible court cases.

Molecular identification of Cmm / Xcc isolates.

The molecular analysis of isolates of plant pathogenic bacteria will give insight in the genetic similarity. This will be done by comparing the DNA profiles from the supplied samples amongst each other and to profiles stored in the database. The results of the analysis can give insight into the relationship between the occurrences of different isolates. The analysis will be performed on a single colony culture. These can be supplied by you, accompanied with a laboratory submission form. A combination with a diagnostic test is also possible if bacteria are found in symptomatic material. A single colony culture will be made on which the molecular analysis and comparison will be performed. The results will be provided in a report including a dendrogram.

Phytopathology

Naktuinbouw can test the quality of seed and plant material for the presence of fungi, viruses and viroids, bacteria, phytoplasmas and nematodes. These tests give you certainty as to the quality of your propagating material.

Testing for bacteria

Seed and plant material can be tested for the presence of bacterial diseases. Methods that are used are e.g., plating, pathogenicity tests and PCR.

Testing for fungi

Testing for fungi is usually done by a plating method, combined with identification by microscope. New DNA techniques are used for sensitive detection of e.g. Fusarium species. Testing for fungi can also be done on soil samples, e.g. for *Verticillium dahliae* and *Fusarium oxysporum* f.sp. *asparagi*.

Testing for Nematodes

Nematodes can seriously harm crops. Preventative testing of the soil, seeds and plant material can prevent this. Naktuinbouw offers testing for various plant-parasitic nematodes which may harm your crops. For example, the presence of *Xiphinema* and *Longidorus* species in soil may be demonstrated as part of the Elite certification procedure for strawberries.

A plant passport is required for trade in onion sets (seed) for stem nematode (*Ditylenchus dipsaci*). A seed test is an option to meet plant passport requirements.

Some other crops also require a statement that they are free from nematode when exported to certain destinations. Naktuinbouw can help you with this. If you would like further information, please contact the Laboratories Administration Team.

Virus tests, viroids and phytoplasms

Plant material can be tested for the presence of viruses, viroids or phytoplasms, using the latest new molecular techniques. A quick test is available for some about 70 viruses in floricultural and arboricultural crops: the ELISA and PCR. These techniques can be used routinely and gives quick results. Testing with indicator plants or PCR is also possible. These tests are only carried out on leaf material. Tissue culture plants show a reduced sensitivity in the ELISA.

Lead time

The mentioned test time is the time between start of the test till sending of the certificate. The waiting time till start of the test will be maximal 2 weeks for leaves and 3 weeks for seeds. In exceptional cases (e.g. large demand of tests) it might deviate.

Overview tests

Plant material of floricultural and arboricultural crops can be tested for many viruses, bacteria, fungi and nematodes. All tests that Naktuinbouw can perform on plant material are listed below. Further on in the price list we indicate per family and species which tests are possible on seeds and which tests we recommend for planting material.

Tropaeolaceae

Such as *Tropaeolum*

Virus				
Pathogen	Method	Lead time (more info on page 13)	Sample size	Test rate per virus (ex. base rate page 6)
AMV, ArMV, CMV, INSV, Potyvirus ¹ , TMV-WU1, ToMV-D03, TSWV, TRV	ELISA	4	1-2 leaves/cuttings, in total ca. 2 cm ²	€ 5,70
BBWV, VeLV	PCR	4	Max. 2 leaves	€ 9,20
			Max. 10 leaves	€ 17,70
			Max. 25 leaves	€ 48,90

¹ If you provide material for testing on Potyvirus, please send a separate sample. We cannot combine this with other ELISA virus tests.

Turneraceae

Such as *Turnera*

Virus				
Pathogen	Method	Lead time (more info on page 13)	Sample size	Test rate per virus (ex. base rate page 6)
AMV, ArMV, CMV, INSV, Potyvirus ¹ , TMV-WU1, ToMV-D03, TRV, TSWV	ELISA	4	1-2 leaves/cuttings, in total ca. 2 cm ²	€ 5,70

¹ If you provide material for testing on Potyvirus, please send a separate sample. We cannot combine this with other ELISA virus tests.

Urticaceae

Such as *Pilea*
